

Presenting Afripay, a decentralized Payment Platform intended for Receiving, spending, receiving, Saving and Staking To make profit.

We're not a bank, financial records nor Credit card but rather we're building an option that could be superior than traditional payment gateways.

We can make it conceivable by removing the failures and skewed plans of action of the current Centralized Payment System by building a totally product, liberated from the centralization of normal traditional payment platforms.

How are these conceivable?

Today there are more parties than you can imagine that are involved in every financial transaction you make and they include banks, credit cards, processors and each of them charges fees every step of the way but with afripay, you can send or receive any amount you can imagine without paying outrageous fees. This is made possible by blockchain technology as our platform's governance token APAY is built on the Binance Smartchain, known for it's Insanely Fast Transaction Speed and Low Fees.

We're in the development stage of building a single wallet where all your money stays where it belongs: in your pocket as you can store your APAY Tokens and other major supported cryptocurrencies.

Users can also choose to send and receive payments using our Native Cryptocurrency APAY Coin.

We also offer an out of the box Afri hardware wallet where users can also secure their cryptocurrencies with guaranteed security.
